CAR DETAILS

- Tested model: HYUNDAI I10, RHD
- Body type: 4 door city car
- Crash test weight: KG 1116
- Year of publication: 2014

ADULT OCCUPANT

The protection offered to the driver head was poor and for this reason the star capping was applied. Driver’s chest protection was marginal. The front passengers’ knees could impact with dangerous structures in the dashboard lie the Tran fascia tube. The bodyshell was rated as unstable. The bodyshell was not capable of withstanding any further loading.

CHILD OCCUPANT

The child seat for the 3 year old child was unable to prevent excessive forward movement during the impact. The 3 years old dummy presented high loading in its chest and head. Both dummies heads’ contacted the front backrests. The recommendation for the 3 years old dummy was to be incompatible with the belt system on the vehicle, while the CRS for the 18 months dummy did not show incompatibility. The installation instructions on both child seats were insufficient and not permanently attached to the seat. The vehicle was not equipped with a passenger airbag.
