FRONT PASSENGER FRONTAL AIRBAG	YES	DRIVER KNEE AIRBAG	NO	ABS (4 CHANNEL)	YES

ADULT OCCUPANT

The protection offered to the driver and passenger head and neck was good. Driver chest showed weak protection while passenger chest showed adequate protection. Driver's knees showed marginal protection and passengers' knees good and adequate protection as they could impact with dangerous structures behind the dashboard supported by the Transfasciatube. The bodyshell was rated as unstable and it was not capable of withstanding further loadings. The car offers standard SBR for driver but it does not meet the minimum requirements.

CHILD OCCUPANT

The child seat for the 3 year old was installed FWF with ISOFIX and top tether and was able to prevent excessive forward movement during the impact while it offered good protection and marginal protection to the chest. The 18 month old CRs was installed with ISOFIX and top tether forward facing which explains the loss of head points, it showed poor protection for the head and chest. The recommended CRSs did not show incompatibility. The vehicle offers standard ISOFIX and top tether anchorages in the 2 outboard rear seats and does not offer 3 point belts in all seating positions.
